

Yieum Yoon

Undergraduate CS Student / Builder

South Korea | junsueddie@gmail.com | yieumyoon.github.io | github.com/YieumYoon
linkedin.com/in/junsueddie

Summary

Undergraduate developer who moved from mechanical engineering interests toward computer science, with a focus on building, reading, writing, and learning in public.

Interested in web development, human-computer interaction, robotics utilities, AR, and product-minded problem solving.

Projects

Spot Fiducial AprilTag Plate Generator

Mar 2026

- Built a browser-based SVG generator for Boston Dynamics Spot fiducial plates.
- Supports tag36h11 AprilTag IDs, print SVG export, CAD SVG export, editable text, and logo options.
- Implemented as a static HTML, CSS, and JavaScript tool deployable on GitHub Pages.

Web AR Camera Technical Review

Dec 2024

- Investigated a web-based AR camera experience and identified likely use of 8th Wall, Three.js, WebRTC, and SLAM-related techniques.
- Documented technical observations from network assets, 3D model files, and browser behavior.

Skills

Languages: JavaScript, TypeScript, Python, HTML, CSS

Interests: Web development, HCI, robotics, AR, user experience

Practices: Reading technical materials in English, self-directed research, prototyping, documentation

Education

- TODO: Add school, degree, dates, and relevant coursework.

Experience

- TODO: Add internships, military experience, leadership, or work history.
